

ChiliProject - Feature # 486: Do not display edit link in annotation page when you don't have permissions

Status:	Closed	Priority:	Normal
Author:	Tom Rochette	Category:	User interface
Created:	2011-06-19	Assignee:	Felix Schäfer
Updated:	2011-12-18	Due date:	
Remote issue URL:			
Affected version:	master		
Description:	When looking at the history of wiki pages, it is possible to check/annotate each version of the pages. On the annotation page, the edit link is displayed while it is not when on the wiki page (for instance) if you have not enough permissions to edit that page. If you don't have enough permissions to edit the wiki page, this link (on the annotation page) should not be visible.

- Assignee set to Felix Schäfer

- Category set to Permissions

I just had a look, the edit link on the annotate page is indeed always shown no matter what. The thing is neither the history nor the diff views have a link to the edit page, the diff page has a link back to the history, but that's all.

In all honesty I'd be tempted to remove the edit link completely instead of showing it selectively, else it should be added everywhere else, along with the rest of the "wiki page" menu (the "watch" link, the lock/unlock, and so on). Would removing the link completely work for you, or do you have need of it on the annotate page?

I'm only suggesting that the UI behavior should be consistent.

Wiki doesn't display edit link => Annotation shouldn't display edit link

Wiki displays edit link => Annotation should display edit link

See <https://github.com/tomzx/chiliproject/commit/3c8a95c69649a74faa120d836e83ed2dbf19b1b9> for an example of a fix.

That's exactly what I'm talking about: no other page than the "show" wiki page has the edit link, so I'd either keep it there only, or add it to all other views too :-)

2 things here. Rather unimportant: if you can see the annotate page, you can also see the history page (in fact, other than a full link, the history page is the only way you can get to the annotate page), so the @link_to_if_authorized@ is probably superfluous. More importantly though, the edit link will show if you have edit permission even if the page is locked, which it shouldn't.

And now that I've thought a little about it: the edit link on the annotate page makes sense at best on the annotate view of the most recent version, as it is the one you will be editing, not for older views. That's probably why it isn't shown on the wiki page when you browse the history either.

I'll see what can be done to make that a little better, I'd completely remove the edit link on the annotate page until then though.

- *Target version set to 2.6.0*

- *Category changed from Permissions to User interface*

- *Status changed from Open to Closed*

I've adapted the menu from the wiki#show actions, which is used for the history view too, to the annotate action. Committed in commit:1ebec83.
