ChiliProject - Bug # 577: Invalid watcher user error when adding an invalid user as watcher

Status:	Closed	**Priority:**	Normal
Author:	Gregor Schmidt	**Category:**	Issue tracking
Created:	2011-08-15	**Assignee:**	
Updated:	2011-08-21	**Due date:**	

Remote issue URL:	http://www.redmine.org/issues/5373
Affected version:	2.1.1
Description:	We were running into the following error, after introducing a new required field to the user model. Whenever somebody, how had not yet filled in the new field, was added as watcher during issue creation, we were getting a validation error:

   translation missing: en, field_watcher_users is invalid

This has been observed in Redmine as well.

The basic problem is, that Chili validates the user model, when trying to add a user to the watchers list. This should probably not happen since it is (a) not the issue's creator's fault and (b) also not done, when adding a watcher to an existing issue.

I have 'ported' the Redmine revision and attached it as pull request.

I'm happy to answer any question arising with this issue.
